

FREE GUIDE

START YOUR OWN SECOND BRAIN

Give your AI a **memory**.

A simple guide — anyone can follow it, in any language, in one
afternoon.

made by **tyy** · 16 years old · documenting the whole build

THE PROBLEM

Your AI forgets you.

Every new chat starts from zero. You explain your life again. And again. It gives you **generic answers** — because it does not know you.

WITHOUT A SECOND BRAIN

what should I work on today?

It depends! Could you tell me more about your goals, your projects, your schedule...

x it knows nothing. you start over every time.

WITH A SECOND BRAIN

what should I work on today?

Your exam is Friday and your project is 80% done — finish the last feature today, study tonight.

✓ it read your files. it knows your life. it answers like a friend who remembers.

What is a second brain?

A folder of files about your life — your goals, projects, notes, story — that your AI reads before it answers you. That's it. Files + AI = memory.

BEFORE YOU START

You need 4 things.

All of them are free or things you already have.

A computer

Any laptop works. Nothing fancy.

have it

Obsidian

A free notes app. Your files stay on **your** computer — private.

free

An AI you already use

Claude, ChatGPT, Gemini — any of them works.

free

30 minutes

That's the real cost. One sit-down and it exists.

today

Build the vault.

Open Obsidian → make a new vault → create these folders. Numbers keep them in order. Each folder answers one question.

My Second Brain/

- ├ 000 Home — your dashboard. what matters right now
- ├ 100 Me — who you are. goals, values, story
- ├ 200 Timeline — what happened, by date. your life log
- ├ 300 Knowledge — things you learn
- ├ 400 Projects — one file per thing you're building
- ├ 500 People — friends, family, who matters
- └ RAW — the inbox. drop anything here, sort later

◆ **Feeling lazy? Start with 3:** Me, Projects, RAW. You can grow the rest later. A small vault you actually use beats a perfect one you don't.

Feed it your life.

Drop everything into **RAW**. Messy is fine — sorting comes later, and your AI can help you sort.

Old AI chats

ChatGPT & Claude let you export everything

Notes & journals

phone notes, docs, anything you wrote

Your goals

write one page: what do you want?

Your story

one page: where you're from, where you're going

Your projects

one file each: what is it, what's next

Ideas

every idea you don't want to lose

RAW / — the more you feed it, the better it knows you

Give your AI the rulebook.

Create one file in your vault that tells the AI how to behave. Copy this to start — change it to fit you:

```
# rulebook.md — my AI's instructions
```

You are my second brain.

1. **Read my files first.** Before answering, check my goals, projects, and timeline.
2. **Remember what you learn.** When I tell you something new about my life — save it to a file.
3. **Log the days.** Big day? Write it to the Timeline.
4. **Be honest with me.** No hype. Real answers.

Claude Code

name it CLAUDE.md — it reads it automatically

ChatGPT / Claude app

make a Project and add your files + rules

Any other AI

paste the rulebook at the start of a chat

Talk to it every day.

This is the secret. A second brain is not built in one day — it **grows**. Every chat, every note, every logged day compounds.

- ◆ **Daily habit (2 minutes):** end of day, tell your AI what happened. It logs the day to your Timeline. In 3 months you'll have something nobody can buy — an AI that actually knows you.

PROOF IT WORKS

This guide was made by my second brain.

Mine has grown past notes — it's a small **team of AI agents** now. They know my whole life, run my tools, and helped write what you just read.

Lumen

the brain — memory, plans, strategy

Luna

research & heavy reading

Vector

writes the code

GymBuddy

my AI fitness coach — lives in iMessage

Instagram

@tyresesig

TikTok

@ty7k1

Everything

tyycc.com

I'm 16. I'm building all of it in public.

Follow the build. Start your vault tonight — future you says thanks. 💎
